Objective :

"Exploring the Impact of Data Analytic in Healthcare"

The workshop will be about getting valuable information into the hands of clinicians and health service managers, where it can be used for decision-making and improving health outcomes for patients. A particular focus will be the increasing role of the decision making in hospitals and health systems and the clinicians, health informatics and health IT staff that are being tasked with delivering the change to a data driven health service. The workshop will also have a focus on the emerging trend for personalized healthcare and the groundswell of consumer-collected health data flowing in to the health system, offering both challenges and opportunities for improved evidence based patient care.

This workshop will bring together leaders in healthcare's to improve the safety, quality and efficiency of health services. The informative five-day program will focus on the use of analytics to gain insight from the increasing amount of data being collected by health services, clinicians and consumers. The size & complexity of these datasets present great challenges in analytics and applications to a clinical environment. In this workshop, we will discuss the characteristics and challenges on dealing with big clinical data from electronic health records.

Healthcare Analytics workshop will offer both a vision of the promising future personalized medicine, value-based care, population health management and the challenges in Health Informatics.
